

## Health and Safety Gap Analysis Overview

Our Gap Analysis Program will identify where your company currently stands in their Occupational Health and Safety practices, then compare those practices to where they should be with regard to current standards. This comparison will highlight areas where your company may fall short (gaps). We will then recommend a plan to focus on those areas and “bridge the gaps” in your Health and Safety Program.

### **How do we accomplish this?**

Our certified consultant(s) will conduct an on-site survey and work directly with a Management Team and/or Health & Safety Coordinator to assist in identifying the weaknesses in the following key areas:

- Safety Program Development
- Compliance with Applicable Regulations and Standards
- Workplace Inspections and Checklists
- Identifying Training Requirements
- Equipment Assessment and Safety Procedures
- JHSC Effectiveness
- Hazards Recognition and Control Job Task Analysis

### **Drafting and Delivering the Final Report**

Our Certified Consultant(s) will summarize the findings and prepare a privileged and confidential report for the client. This report will provide feedback, insightful suggestions and a recommended course of action.

### **Benefit to Your Company**

This is an independent, unbiased report dedicated to helping address areas of concern in your Health and Safety Program, thus making it more effective in helping to reduce accidents and incidents within the workplace.
